(57) **ABSTRACT**

A flat panel display apparatus with a mounting apparatus includes a display screen, a handle member, a supporting member and a stand member. The handle member is disposed at the edge or the rear of the display screen. The supporting member is pivotally secured to the handle member. The supporting member has a first arm portion and a second arm portion where an obtuse angle is formed between the first arm portion and the second arm portion. The stand member is disposed at an end of the second arm portion to provide friction between the second arm portion and contacted surface thereon and prevent the second arm portion from escaping as the display screen is in an upright position.
